What's up, Doc?

When I was younger, each Sunday my pastor would have a 'children's sermon' and ask the young kids to come to the front of the church to try to 'stump the pastor'. All of the church kids rotated Sundays and brought in an item that, in their mind, had nothing to do with God, to see if the pastor could relate it. Somehow he always managed.

I'd like to try this concept with AHT's Dr. Glow...do you have a plasma or gas nitriding-related question that you think would 'stump' him?

Dr. Edward Rolinski, aka Dr. Glow, graduated from the Warsaw University of Technology Department of Mechanical Manufacturing Technologies with a Master of Science in Mechanical Engineering and specialization in the Physical Metallurgy and Heat Treatment of Metals. He received his Doctorate of Philosophy in 1978 and Doctor of Science degree in 1989 for his thesis and scientific work on the application of the cold plasma/glow discharges to the surface treatment of solids.
